

Ahmad Arnaoute

Bucharest, Romania

[Ahmad1827](#) | [ahmad-arnaoute](#) | [ahmadarnaoute1896@gmail.com](#)

SUMMARY

A creative and persistent 3rd year Computer Science student with advanced knowledge of C/C++, Java, Dart, and core computer science fundamentals. Highly passionate about problem-solving and adaptable to diverse challenges, seeking a software engineering internship to apply technical expertise and contribute innovative, out-of-the-box solutions.

EDUCATION

2024–2028 **B.Sc. Computer Science (CTI)**, University Politehnica of Bucharest
Academic Status: 100% Exam Pass Rate (Integralist) | Current GPA: 8.20
2020–2024 Baccalaureate Diploma, George Calinescu Theoretical High School, Bucharest
Specialization: Mathematics and Computer Science

EXPERIENCE

Independent Developer - AtodDev 2023–Present

- Designed and implemented cross-platform apps and games with modular, maintainable code.
- Applied Object-Oriented Programming principles to design scalable, reusable modules for multiple projects.
- Built a tutoring platform using Flutter and Firebase, featuring user authentication and responsive design.
- Maintained an indie-game portfolio on itch.io and Google Play, publishing projects in C++/SDL2 and Java.

PROJECTS

Tutoring Platform (Flutter/Dart, Firebase) [Portfolio](#)

Developed a comprehensive cross-platform tutoring system connecting students and educators. Designed a role-based architecture with secure Firebase Authentication and real-time Firestore database synchronization. Implemented dynamic scheduling, interactive dashboards, and scalable, reusable UI components using modern Flutter state management, ensuring a seamless experience across mobile and web platforms.

2D Animation & Graphics Engine (C++, SFML) [Repository](#)

Engineered a comprehensive 2D drawing application featuring a custom frame-based timeline and modular layer system with dynamic blend modes. Developed an advanced freehand lasso selection tool utilizing ray-casting point-in-polygon algorithms and affine transformations, alongside an event-driven GUI with a fully configurable keybind manager.

GitHub PR Management Bot (Python, GitHub API) [Repository](#)

Engineered an automated Python-based bot leveraging the GitHub API to streamline repository workflows for open-source maintainers. Implemented intelligent triage by automatically categorizing issues, analyzing pull request diffs, and assigning appropriate reviewers and labels. Reduced manual administrative overhead and accelerated the CI/CD pipeline through robust webhook integration and event-driven architecture.

Cross-Platform Game Portfolio (Java, C++, SDL2) [itch.io](#) | [Google Play](#)

Published multiple Android and PC games (e.g., Flying Cat, Pong). Projects showcase strong OOP design, modular architecture, and performance optimization.

Chunk Physics Simulator & C to Assembly Translator (C) [Physics](#) | [Translator](#)

Created a 3D engine for physical interactions focused on data-oriented design, and built a compiler-style C-to-Assembly parser. Showcased performance optimization and low-level architecture understanding.

SKILLS

Programming Languages	C, C++, Java, Python, Dart, SQL, Rust, Assembly, HTML, CSS, JavaScript
Frameworks & Tools	SFML, SDL2, Flutter, Android Studio, Firebase, FastAPI, REST APIs, Git, Linux
Core Competencies	OOP, System Design, Systems Programming, Algorithms, Data Structures
Soft Skills	Problem Solving, Creativity, Communication, Adaptability, Self-Learning, Teamwork
Languages	English (Advanced), Romanian (Native)
